
HERO SECTION

Agent Name

AI Resume Screening Agent

ID

HR-ATS-001

Tagline

Automatically evaluates, scores, and shortlists AI candidates using ATS-style screening and hiring intelligence.

OVERVIEW

The AI Resume Screening Agent automates the initial candidate evaluation process for AI and machine learning roles. The system analyzes resumes, extracts candidate information, evaluates qualifications against predefined hiring criteria, and generates structured hiring recommendations.

By eliminating manual resume screening, recruiters can quickly identify high-potential candidates while maintaining a consistent and objective evaluation process across every application.

SYSTEM REQUIREMENTS

- Candidate resume uploads
 - PDF or document parsing capability
 - OpenAI model access
 - Google Sheets integration
 - Recruitment scoring framework
 - Candidate communication workflow
 - Email delivery system
 - Hiring evaluation criteria
-

OPERATIONAL PROTOCOL

HOW IT WORKS

The agent receives candidate resumes and extracts relevant information including contact details, education, experience, location, and AI-related skills.

Each candidate is automatically evaluated against a predefined scoring model that measures:

- AI/ML educational background
- LLM experience
- RAG experience
- Chatbot development experience
- Agentic AI experience
- Generative AI exposure
- Professional experience level
- Geographic eligibility
- Relocation flexibility

After scoring, the system assigns a hiring recommendation and routes candidates into appropriate recruitment pipelines.

EXPECTED OUTPUT

The agent produces:

- Candidate profile extraction
- Contact information identification
- AI skills assessment
- Experience evaluation
- Qualification scorecard
- ATS compatibility score
- Hiring recommendation
- Candidate classification
- Recruitment tracking records
- Automated interview invitations

OUTPUT SAMPLES

Sample 1

Resume Evaluation Result

```
{
  "candidate_name": "Rahul Sharma",
  "degree_detected": "B.Tech Artificial Intelligence",
  "keywords_hit": ["LLM", "RAG", "Agent", "GenAI"],
  "total_score": 82,
  "status": "Shortlisted"
}
```

Sample 2

Candidate Assessment

Input:

Resume contains:

- 3 years AI experience
- RAG applications
- LLM projects
- Mumbai location

Output:

```
{
  "total_score": 78,
  "status": "Shortlisted"
}
```

Sample 3

Candidate Assessment

Input:

Resume contains:

- General software background
- No AI projects

- No GenAI experience

Output:

```
{  
  "total_score": 28,  
  "status": "Rejected"  
}
```

SYSTEM REQUIREMENTS SIDEBAR

Replace current sidebar with:

- Resume Upload Capability
- OpenAI GPT Integration
- Google Sheets Database
- Candidate Evaluation Framework
- Recruitment Workflow Configuration
- Automated Email Integration
- ATS Scoring Logic
- Hiring Decision Thresholds

AGENT CARD CONTENT

Title

AI Resume Screening Agent

Description

ATS-powered recruitment assistant that evaluates AI candidates, scores resumes, automates shortlisting, and triggers interview workflows.

Tags

- Resume Screening
- ATS Automation
- AI Recruitment

One more important observation

The scoring logic is extremely specific to **AI hiring**:

- LLM
- RAG
- Chatbot
- Agentic AI
- GenAI
- AI/ML Degree

This means you shouldn't market it as a generic HR agent. You should position it as:

AI Talent Screening Agent

or

AI Recruitment Automation Agent

because that's exactly what the workflow is doing under the hood.

That alignment will make the website content match the actual JSON workflow and later the trigger-button results.
